JOB BOARD APPLICATION

System Requirements Specification

BACKEND-SPRING BOOT RESTFUL APPLICATION

1 PROJECT ABSTRACT

The **Job Board Application** is implemented using Spring Boot with a MySQL database. The application aims to provide a comprehensive platform for managing and organizing all jobs for job seekers.

Following is the requirement specifications:

Delete user by id

	Job Board Application
Modules	
1	Job
2	User
Job Module	
Functionalities	
1	List all jobs
2	Get job by id
3	Create job
4	Update job by id
5	Delete job by id
User Module	
Functionalities	
1	List all users
2	Get user by id
3	Create user
4	Update user by id

2 ASSUMPTIONS, DEPENDENCIES, RISKS / CONSTRAINTS

2.1 JOB CONSTRAINTS

- When fetching a job by ID, if the job ID does not exist, the operation should throw a not found exception.
- When updating a job, if the job ID does not exist, the operation should throw a not found exception.
- When removing a job, if the job ID does not exist, the operation should throw a not found exception.

2.2 USER CONSTRAINTS

- When fetching a user by ID, if the user ID does not exist, the operation should throw a not found exception.
- When updating a user, if the user ID does not exist, the operation should throw a not found exception.
- When removing a user, if the user ID does not exist, the operation should throw a not found exception.

Common Constraints

- For all rest endpoints receiving @RequestBody, validation check must be done and must throw custom exception if data is invalid
- All the business validations must be implemented in dto classes only.
- All the database operations must be implemented on entity object only
- Do not change, add, remove any existing methods in service layer
- In Repository interfaces, custom methods can be added as per requirements.
- All RestEndpoint methods and Exception Handlers must return data wrapped in ResponseEntity

3 BUSINESS VALIDATIONS - Job

- Title is not blank.
- Salary bracket is not blank.
- Location is not blank.
- Required skills are not blank.

4 BUSINESS VALIDATIONS - User

- Name is not blank.
- Phone number is not blank.
- Email is not blank and must be of email type.

5 REST ENDPOINTS

Rest End-points to be exposed in the controller along with method details for the same to be created

5.1 JOBCONTROLLER

URL Exposed		Purpose
1. /api/jobs		
Http Method	GET	Fetches all the jobs
Parameter	-	
Return	List <job></job>	
2. /api/jobs/{id}		
Http Method	GET	Get a job by id
Parameter 1	Long (id)	
Return	Job	
3. /api/jobs		
Http Method	POST	Create a new job
Parameter	-	
Return	Job	
4. /api/jobs/{id}		
Http Method	PUT	Updates existing job by id
Parameter 1	Long (id)	
Return	Job	
5. /api/jobs/{id}		
Http Method	DELETE	5.1.
Parameter 1	Long (id)	Deletes a job by id
Return	-	

5.2 USERCONTROLLER

URL Exposed		Purpose
1. /api/users		
Http Method	GET	Fetches all the users
Parameter	-	
Return	List <user></user>	
2. /api/users/{id}	•	
Http Method	GET	Get a user by id
Parameter 1	Long (id)	
Return	User	
3. /api/users	•	
Http Method	POST	Create a new user
Parameter	-	
Return	User	
4. /api/users/{id}		
Http Method	PUT	Updates existing user by id
Parameter 1	Long (id)	
Return	User	
5. /api/users/{id}		
Http Method	DELETE	
Parameter 1	Long (id)	Deletes a user by id
Return	-	

6 TEMPLATE CODE STRUCTURE

6.1 PACKAGE: COM.JOBBOARD

JobBoardApplication	This is the Spring Boot	Already
(Class)	starter class of the application.	Implemented

6.2 PACKAGE: COM.JOBBOARD.REPOSITORY

Resources

Class/Interface	Description	Status
JobRepository (interface)	Repository interface exposing	Partially implemented.
	CRUD functionality for Job Entity.	
	You can go ahead and add any	
	custom methods as per	
	requirements.	
UserRepository (interface)	Repository interface exposing	Partially implemented.
	CRUD functionality for User	
	Entity.	
	You can go ahead and add any	
	custom methods as per	
	requirements.	

6.3 PACKAGE: COM.JOBBOARD.SERVICE

Class/Interface	Description	Status
JobService (interface)	 Interface to expose method signatures for job related functionality. Do not modify, add or delete any method. 	Already implemented.
UserService (interface)	 Interface to expose method signatures for user related functionality. Do not modify, add or delete any method. 	Already implemented.

6.4 PACKAGE: COM.JOBBOARD.SERVICE.IMPL

Class/Interface	Description	Status
JobServiceImpl (class)	 Implements JobService. Contains template method implementation. Need to provide implementation for job related functionalities. Do not modify, add or delete any method signature 	To be implemented.
UserServiceImpl (class)	 Implements UserService. Contains template method implementation. Need to provide implementation for user related functionalities. Do not modify, add or delete any method signature 	To be implemented.

6.5 PACKAGE: COM.JOBBOARD.CONTROLLER

Class/Interface	Description	Status
JobController (Class)	Controller class to expose all	To be implemented
	rest-endpoints for job related	
	activities.	
	May also contain local	
	exception handler methods	

UserController (Class)	Controller class to expose all To be implemented
	rest-endpoints for user
	related activities.
	May also contain local
	exception handler methods

6.6 PACKAGE: COM.JOBBOARD.DTO

Class/Interface	Description	Status
JobDTO (Class)	Use appropriate annotations from the	Partially implemented.
	Java Bean Validation API for validating	
	attributes of this class.	
UserDTO (Class)	Use appropriate annotations from the	Partially implemented.
	Java Bean Validation API for validating	
	attributes of this class.	

6.7 PACKAGE: COM.JOBBOARD.ENTITY

Class/Interface	Description	Status
Job (Class)	• This class is partially	Partially implemented.
	implemented.	
	• Annotate this class with proper	
	annotation to declare it as an	
	entity class with id as primary	
	key.	
	• Map this class with a job table .	
	• Generate the id using the	
	IDENTITY strategy	
Llean (Class)	• This class is partially	Partially implemented.
User (Class)	. ,	raitially implemented.
	implemented.	
	• Annotate this class with proper	
	annotation to declare it as an	
	entity class with id as primary	
	key.	
	• Map this class with a user table .	
	• Generate the id using the	
	IDENTITY strategy	

Resources

Class/Interface	Description	Status
NotFoundException (Class)	• Custom Exception to be	Already implemented.
	thrown when trying to	
	fetch or delete the	
	product/sell info which	
	does not exist.	
	Need to create Exception	
	Handler for same wherever needed (local or global)	

1 EXECUTION STEPS TO FOLLOW FOR BACKEND

- 1. All actions like build, compile, running application, running test cases will be through Command Terminal.
- 2. To open the command terminal the test takers need to go to the Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal.
- 3. cd into your backend project folder
- 4. To build your project use command:

mvn clean package -Dmaven.test.skip

5. To launch your application, move into the target folder (cd target). Run the following command to run the application:

java -jar <your application jar file name>

- 6. This editor Auto Saves the code.
- 7. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use CTRL+Shift+B-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
- 8. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was

- stopped from the previous logout.
- 9. To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.
- 10. To test any UI based application the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.
- 11. Default credentials for MySQL:
 - a. Username: root
 - b. Password: pass@word1
- 11. To login to mysql instance: Open new terminal and use following command:
 - a. sudo systemctl enable mysql
 - b. sudo systemctl start mysql
 - c. mysql -u root -p

The last command will ask for password which is 'pass@word1'

12. Mandatory: Before final submission run the following command:

mvn test

13. You need to use CTRL+Shift+B - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
